

“the best keyboard Apple ever made” rises again.

**tactilepro**<sup>tm</sup>  
a better keyboard for your Mac

**Mechanical keyswitches for maximum comfort and speed.**

The Tactile Pro Keyboard from Matias is built from the same premium keyswitch technology that Apple used in the original Apple Extended Keyboard, widely viewed as the best keyboard Apple ever made. Its high-quality Alps mechanical keyswitches offer enhanced tactile feedback, for greater comfort and faster typing speeds.

**Special characters and symbols at your fingertips.**

No need to launch another application to find that special symbol. For quick and easy reference, the Tactile Pro's key caps are clearly labeled with the international characters, accents, punctuation, and currency symbols that are available by holding down the Option or Shift+Option keys.

**Modern look and features.**

With standard Eject and Volume control keys, the Tactile Pro Keyboard has been carefully designed to match the look and features of Apple's Pro Keyboard. It will look as good on your desk as your Mac does.

**2-port USB hub.**

No more reaching through the tangle of wires behind your computer to quickly attach a USB peripheral. Just plug it into the keyboard and you're ready to go. Works great with digital cameras, MP3 players, keyring hard drives, joysticks, and mice too.

**Built like a tank.**

The Tactile Pro is built to last, and comes with a 5 year warranty.
