

## **World's smallest wireless USB-C receiver, new mice & aluminum keyboards, announced by Matias at CES**

LAS VEGAS, Monday, January 11, 2024 — This week at CES, Matias debuted a whole new line of keyboards and mice for fans of wireless USB-C — and they all connect to the world's smallest wireless receiver for USB-C, a first for the industry.

“Logitech did their first small USB receiver back in 2007 — but nothing for USB-C. Other companies have started doing USB-C receivers (Lenovo, for example) but we are the first to do one this small. It's absolutely tiny,” said Edgar Matias, CEO of Matias.

<https://youtu.be/sYUwrhqSkbl>

“With Europe mandating a switch to USB-C by the end of 2024, and similar mandates from California and India, that means all those tiny USB wireless dongles we've relied on for 20 years are going away. We are the first keyboard & mouse maker to offer a suitable USB-C replacement — the world's smallest,” added Matias.

Ranging from \$29 to \$79, the company has wireless USB-C keyboard and mouse options, over a broad range

of price points.

They will be on display at CES this week, in LVCC Central Hall, Booth #22743.
